# Audio Signal Processing

**ASP-SoC** — AUDIO SIGNAL PROCESSING

- Universal Standalone Audio-Processing Unit
- Processing-Blocks in hardware
- On-chip Linux OS
- Software interface for configuration and visualisation of the processing chain

Planned Blocks

- Equalizer
- Delays/Echos
- Generic Filters (FIR & IIR)
- Fast-Fourier-Transformation for operations in the frequency domain

System-on-Chip (SoC)

ARM-Core (Linux)

Configuration of Block-parameters and routing

Data-Extraction (Stream)

FPGA-Fabric

Audio-In

Audio-Out

Team: David Haberleitner, Johannes Posch, Thomas Reisinger, Martin Steiger, Franz Steinbacher, Michael Wurm
Project supervisor: FH-Prof. Dipl.-Ing. Dr. Markus Pfaff
